

decotric Insulating Salt

decotric Isoliersalz

Substrate pre-treatment powder for the neutralisation of alkaline substrates

Instructions for use: *decotric Insulating Salt* is suitable for the neutralisation of fresh cement and lime facing in order to prevent discolouring of subsequently applied coloured dispersion-based paints and damage to non-saponification resistant materials.

Technical information:

Components:	Aluminium sulphate
Mixing ratio:	100 g in 1.0 l water
pH value:	approx. 3.5 (in correct dilution for use)
Coverage per m ² :	approx. 100 ml/m ²
Density:	approx. 1.00 g/cm ³

Surface preparation: The substrate must be dry, stable and free of dust and grease. Remove loose plaster and blooms.

Application: Do not use metal containers when mixing the solution.

Stir *decotric Insulating Salt* into water and allow to dissolve completely. Apply the solution to the surface to be treated using a brush. Wash with clean water about ten minutes after application in order to remove unconverted salts. Allow to dry fully before performing any further work.

Clean tools with water immediately after use.

Important information: Please see the EU Safety Data Sheet for all safety-related data (EU-CLP).

Storage: Store in a cool dry place. Keep the container tightly sealed.

Available sizes:

100 g paper container	005101001
500 g carton	005102001
